

AMENDMENTS TO THE CLAIMS

Please **AMEND** claim 1 as shown below.

This claim list replaces all prior claim lists in the application.

1. (Currently Amended) A method that utilizes a processor to provide answers to a question, comprising:
 - (a) receiving a question from a first user;
 - (b) providing the question on a given web page;
 - (c) receiving evaluation data for the question from a second user [[or]] and an operator of the web page;
 - (d) calculating evaluation result data, using the processor, by reflecting the evaluation data; and
 - (e) providing the evaluation result data on the web page in association with the question.
2. (Previously Presented) The method as claimed in claim 1, wherein step (e) comprises displaying the evaluation result data as a predetermined graph.
3. (Previously Presented) The method as claimed in claim 1, further comprising displaying the question according to a predetermined display method if the evaluation result data is not coincident with a predetermined reference.
4. (Previously Presented) The method as claimed in claim 1, wherein

step (c) comprises receiving one of "affirmation" and "negation" for the question from the second user or the operator, and step (d) comprises:

increasing given evaluation value data corresponding to the evaluation result data if the "affirmation" is received; and

reducing the evaluation value data if the "negation" is received.

5. (Previously Presented) The method as claimed in claim 1, wherein step (d) comprises: determining whether the received evaluation data is evaluation data that is received from the operator or a user to which predetermined authority has been assigned by the operator; and calculating the evaluation result data by assigning a predetermined weight to the evaluation data that is received from the operator or the user to which predetermined authority has been assigned by the operator.

6. (Previously Presented) The method as claimed in claim 1, further comprising increasing point data associated with the second user by a predetermined value in response to the input of the evaluation data.

7. (Previously Presented) The method as claimed in claim 6, wherein increasing the point data by the predetermined value comprises:

receiving a limit number corresponding to a predetermined unit period from the operator; counting an input number that the second user inputs the evaluation data during the unit period; and

if the input number is below the limit number, increasing the point data associated with the second user by the predetermined value in response to the input of the evaluation data.

8. (Previously Presented) A method that utilizes a processor to provide answers to a question, comprising:

providing a question input by a first user on a given web page;

receiving an answer for the question from a second user;

providing the answer on the web page in association with the question;

if a plurality of answers are input, receiving votes for the answers from a third user for a predetermined voting period; and

increasing polling score, using the processor, corresponding to the answers in response to the input of the votes.

9. (Previously Presented) The method as claimed in claim 8, further comprising providing the polling score on the web page in association with the answers.

10. (Original) The method as claimed in claim 8, wherein the voting period is a predetermined period input by the first user and/or a period until the number of voters input by the first user is reached.

11. (Original) The method as claimed in claim 8, wherein the voting period is a predetermined period input by an operator and/or a period until a given number of voters input by the operator is reached.

12. (Previously Presented) The method as claimed in claim 8, wherein receiving the answer comprises receiving answers to the question from the second user for a predetermined answer period, and

receiving the votes comprises receiving the votes for the answers from the third user if the answer period has elapsed.

13. (Original) The method as claimed in claim 12, wherein the answer period is a predetermined period input by the first user.

14. (Previously Presented) The method as claimed in claim 8, further comprising adopting one or more answers based on the polling score if the voting period has elapsed.

15. (Previously Presented) The method as claimed in claim 8, wherein if the polling score corresponding to the answers is less than predetermined polling score after the voting period has elapsed, not adopting an answer and displaying that there is no adopted answer.

16. (Previously Presented) The method as claimed in claim 14, further comprising displaying the adopted answer according to a predetermined display method.

17. (Previously Presented) The method as claimed in claim 14, further comprising:
deciding the second user who input the adopted answer as an answer adopter; and
increasing point data associated with the answer adopter by a predetermined value.

18. (Previously Presented) The method as claimed in claim 17, wherein increasing the point data associated with the answer adopter by the predetermined value comprises:
maintaining point data associated with a user in a point database;
receiving compensation point data from the first user;

increasing the point data associated with the answer adopter by the compensation point data based on the compensation point data; and

reducing the point data associated with the first user by the compensation point data.

19. (Previously Presented) The method as claimed in claim 18, wherein increasing the point data associated with the answer adopter by the compensation point data based on the compensation point data comprises:

if plural answers are adopted, distributing the compensation point data input by the first user in the ratio of the polling score corresponding to each of the adopted answers; and

increasing the point data associated with each answer adopter by the distributed compensation point data.

20. (Previously Presented) The method as claimed in claim 8, further comprising increasing the point data associated with the third user by a predetermined value in response to the input of the votes.

21. (Previously Presented) The method as claimed in claim 20, wherein increasing point data by a predetermined value comprises:

receiving a limit number corresponding to a predetermined unit period from an operator;

counting an input number that the third user inputs votes for the unit period; and

if the input number is below the limit number, increasing the point data associated with the third user by the predetermined value in response to the input of the votes.

22. (Previously Presented) The method as claimed in claim 8, wherein receiving the votes comprises:

receiving a vote return command for the answers from the first user; and
receiving votes for the answers from the third user after the vote return command is
input.

23. (Previously Presented) A method that utilizes a processor to provide answers to a
question, comprising:

providing a question input by a first user on a given web page;
receiving answers to the question from a second user for a predetermined period;
providing the answers on the web page in association with the question;
if the period has elapsed, receiving input for adopting the answer and evaluation data for
the adopted answer from the first user; and
increasing point data, using the processor, associated with the second user who input
the adopted answer based on the evaluation data.

24. (Previously Presented) The method as claimed in claim 23, wherein receiving the
evaluation data comprises receiving one of the given number of evaluation grades for the
adopted answer from the first user, and

increasing the point data comprises:
maintaining a point data value corresponding to the evaluation grade; and
increasing the point data associated with the second user by the point data value
corresponding to the evaluation grade.

25. (Previously Presented) The method as claimed in claim 14 or 23, further comprising:
receiving a problem raised for the adopted answer by a fourth user;
providing the raised problem to the second user who input the adopted answer;

receiving an additional answer for the raised problem from the second user who input the adopted answer; and
providing the additional answer on the web page in association with the adopted answer.

26. (Previously Presented) The method as claimed in claim 25, wherein receiving the additional answer comprises:

counting the number of additional answers input; and
allowing the additional answers not to be input if the number exceeds a given number.

27. (Previously Presented) The method as claimed in claim 14 or 23, further comprising:
receiving a problem raised for the adopted answer by a fourth user;
providing the raised problem to the second user who input the adopted answer;
if the second user who input the adopted answer does not agree with the raised problem, receiving a cause of a rejection for the raised problem from the second user; and
providing the cause of the rejection to the fourth user.

28. (Previously Presented) The method as claimed in claim 27, further comprising
providing the raised problem in association with the adopted answer.

29. (Previously Presented) A method that utilizes a processor to provide answers to a question, comprising:

- (a) providing a question input by a first user on a given web page;
- (b) receiving answers for the question from a second user for a predetermined period;
- (c) providing the answers on a web page in association with the question;

(d) deciding, using the processor, the question and an answer associated with the question as knowledge data;

(e) receiving a recommendation for the knowledge data from a third user; and

(f) providing the recommendation on the web page in association with the knowledge data.

30. (Previously Presented) The method as claimed in claim 29, further comprising displaying the recommended knowledge data according to a predetermined display method.

31. (Previously Presented) The method as claimed in claim 29, wherein:

step (e) comprises-receiving a category associated with the knowledge data from the third user, and

step (f) comprises displaying the category in association with the knowledge data.

32. (Previously Presented) The method as claimed in claim 29, further comprising:

maintaining the knowledge data and recommendation information associated with the knowledge data in a knowledge database;

receiving a search request for the knowledge data from a fourth user;

searching the knowledge database for the knowledge data in response to the search request;

determining an arranging order of the searched knowledge data; and

displaying the searched knowledge data according to the arranging order,

the step of determining the arranging order of the searched knowledge data comprises the steps of:

determining whether the searched knowledge data are recommended knowledge data based on the recommendation information; and

determining the arranging order by assigning a predetermined weight to the recommended knowledge data.

33. (Previously Presented) A computer-readable recording medium in which a program for implementing a method according to claim 1 is recorded.
